DETAILED ACTION

Allowable Subject Matter

Claims 16 – 23 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art of record does not teach or suggest:

conditionally executing different instructions based on a probe cache instruction execution result in a manner that is claimed.

For example, Reinman *et al.* (Fetch Directed Instruction Prefetching, IEEE 1999) disclose a method of probing a cache, without reading or loading data, and conditionally pre-fetching data which would result in conditional execution of different instructions depending on the result of a cache probe. However, unlike Reinman's method, the claims require that the instruction immediately following the cache probe instruction in the program code be executed and that a different instruction be fetched and executed if there is a cache probe miss.

Horowitz *et al.* (Informing Memory Operation, see previous action) disclose a method of conditional branching based on the result of an instruction that checks for a cache hit/miss status without reading or loading data. However, Horowitz's instruction checks the status of a prior access and does not determine hit/miss status in response to the presence or the absence of data in a cache while executing a probe-cache instruction as recited in the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Comisky et al. (US Patent No. 6,65,767) disclose a computer system that enables program controlled cache state operation.
